

# **SERIES 670E**

## **End-of-Line Deflagration Flame Arrester**

Suitable for use with Explosion Groups IIB3 or IIA (NEC Groups C or D) Vapors

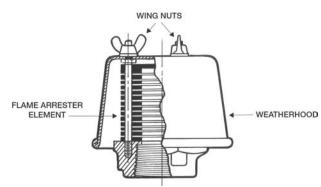

- Sizes DN 25 (1") through DN 150 (6")
- Conforms to the latest ATEX Directive, ISO 16852
- Suitable for use with Explosion Groups IIB3 or IIA (NEC Groups C or D)
- Parallel plate-type flame arrester
- Operating temperatures up to +60°C (140°F)
- Available with threaded (FNPT) or flanged (DIN, ANSI) connections
- Easy inspection and maintenance
- Weatherhood protects against environmental conditions
- Available in Aluminum, Steel and Stainless Steel

# SERIES 670E

#### **OBJECTIVE**

The Series 670E Flame Arresters are designed to provide flame stopping protection for a tank's vapor space when mounted to the end of a tank nozzle leading directly to atmosphere. Maximum operating pressure is 1.1 bara (15.9 PSIA). The arresters prevent a flame front generated by an unconfined deflagration occurring outside the tank from propagating into the vapor space. Arresters are not for use instabilized burning situations.

#### **VAPOR GROUPS**

The arresters as designated by model number, are intended for use with vapors equivalent to International Electrotechnical Commission Explosion (IEC) Groups IIB3 or IIA, National Electric Code (NEC) Group C or D.

#### **TECHNIQUE**

The arrester is mounted on the end of a vent pipe from the tank. Vapors are allowed to escape into the atmosphere and air can be drawn into the tank through the specially designed flame arrester grid assembly. If an ignition source outside the tank is encountered, the flame arrester provides protection for the tank contents.

#### **SPECIAL FEATURES**

**Easy Inspection, Installation and Maintenance.** Design and light weight of unit permit easy, convenient handling for inspection, installation and maintenance. The weatherhood is readily removable by loosening just a few wing nuts.

**Automatic Condensate Drainage.** Vertically mounted, circular plate-type flame arrester is employed for self-drainage of condensate. This prevents accumulation of condensate subject to freezing and consequent clogging of the arrester under low temperature conditions.

**Positive Flame Arresting.** The Series 670E employs a precisely-spaced, circular plate type flame arrester to protect tank contents by preventing the propagation of fire into the tank. Precision embossings or spacers provide correct gaps for flame arresting function. Plates are fabricated from heavy gauge stainless steel to resist distortion and bending.

**Sizes Available.** DN 25 (1"), DN 50 (2"), DN 80 (3") and DN 100 (4") and DN 150 (6"). Please refer to dimension chart on reverse for flange connection options.

**Test Lab Listings.** Conforms to the latest ATEX Directive, ISO 16852. Refer to Protectoseal Series 670/6670 for Underwriters Laboratories (UL) Listed arresters.

PRO-FLOW ® Sizing and Selection Software. Use PRO-FLOW ® to calculate flame arrester flow requirements in accordance with API 2000, ISO 28300, NFPA 30 and OSHA 1910.106.

**Quality Assurance.** Each unit is inspected to meet Protectoseal's high standards prior to shipment.

#### CONSTRUCTION

A comprehensive range of materials is offered as shown in the chart below.

#### Available Options.

➤ Material certifications for castings

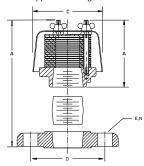

Series	Body	Hood	Nipple/ Flange	Flame Arrester Grid Assembly
A670E	Aluminum	316 S.S.	Aluminum	316 S.S.
F670E	316 S.S.	316 S.S.	316 S.S.	316 S.S.
S670E	Steel	316 S.S. <sup>1</sup>	Steel	316 S.S.

Please refer to charts on reverse for ordering options. Note 1: Hood on 6" size is constructed of Steel.

## **Specifications**

#### DN 25 (1"), DN 50 (2"), DN 80 (3") & DN 100 (4") Sizes

FNPT or Nipple and Flange Connection

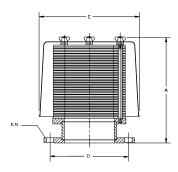

Suitable for use with International Electrotechnical Commission (IEC) Groups IIB3 or IIA (NEC Groups C or D), as designated by model number.
