

FB06

Bypass Level Indicator

- **detection and display of the filling level of liquids, even aggressive, turbulent, dirty, flammable, hot and toxic media**
- **simple, robust and unbreakable construction**
- **pressure- and gas-tight separation of measuring and display room**
- **pressure ranges from vacuum to 400 bar**
- **temperature range from -196 °C to +450 °C**
- **level indicator without auxiliary energy**
- **transmitter and/or alarm contacts available**
- **process- and procedure-specific fabrication**
- 

Description:

The FB06 bypass level indicators consist of a standpipe which is attached to the side of a vessel as a communicating vessel via process connections (flange, threaded or welded spigots). Due to this mounting, the level in the standpipe corresponds to the level in the vessel. A cylinder float located in the standpipe with integrated permanent magnet system transmits this level without contact to an externally mounted roller or flap display and / or actuates a transmitter and / or alarm contacts.

Typical applications:

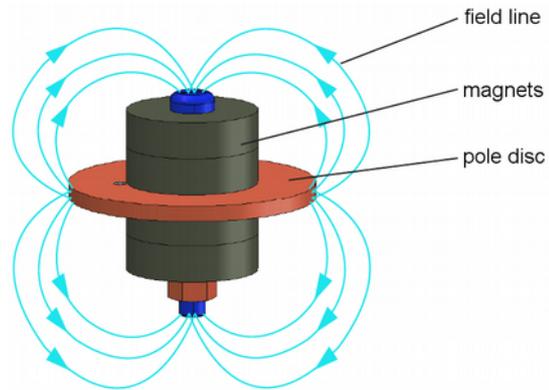

By using a wide variety of materials, the bypass level indicators can be used in all industrial sectors. Machinery and tank construction water treatment, environmental technology chemical industry, petrochemical industry, offshore, shipbuilding energy plants, power stations pharmaceutical industry, food industry.

Models:

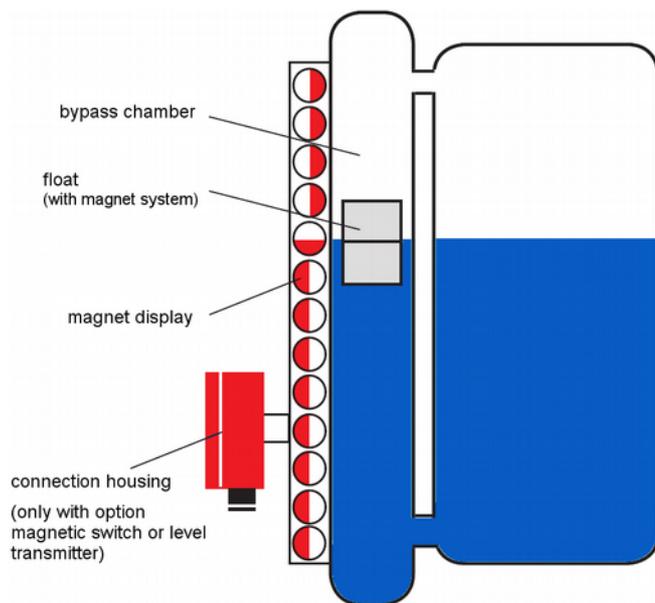

FB06.M:	miniature version, max. 40 bar
FB06.S:	standard version, max. 100 bar
FB06.H:	high pressure version, max. 385 bar
FB06.W:	materials titanium, Hastelloy st. steel 6 Mo 1.4547, max. 250 bar
FB06.B:	with internal coating E-CTFE or PTFE, max. 16 bar
FB06.K:	plastic version, max. 6 bar

Magnet system:

The magnet system is assembled from a pole disc and various magnets. The magnets can be individually adapted to the different chamber dimensions and temperatures up to 450 °C. The magnets can be mounted on a pole disc.

Principle diagram:

Design and function:

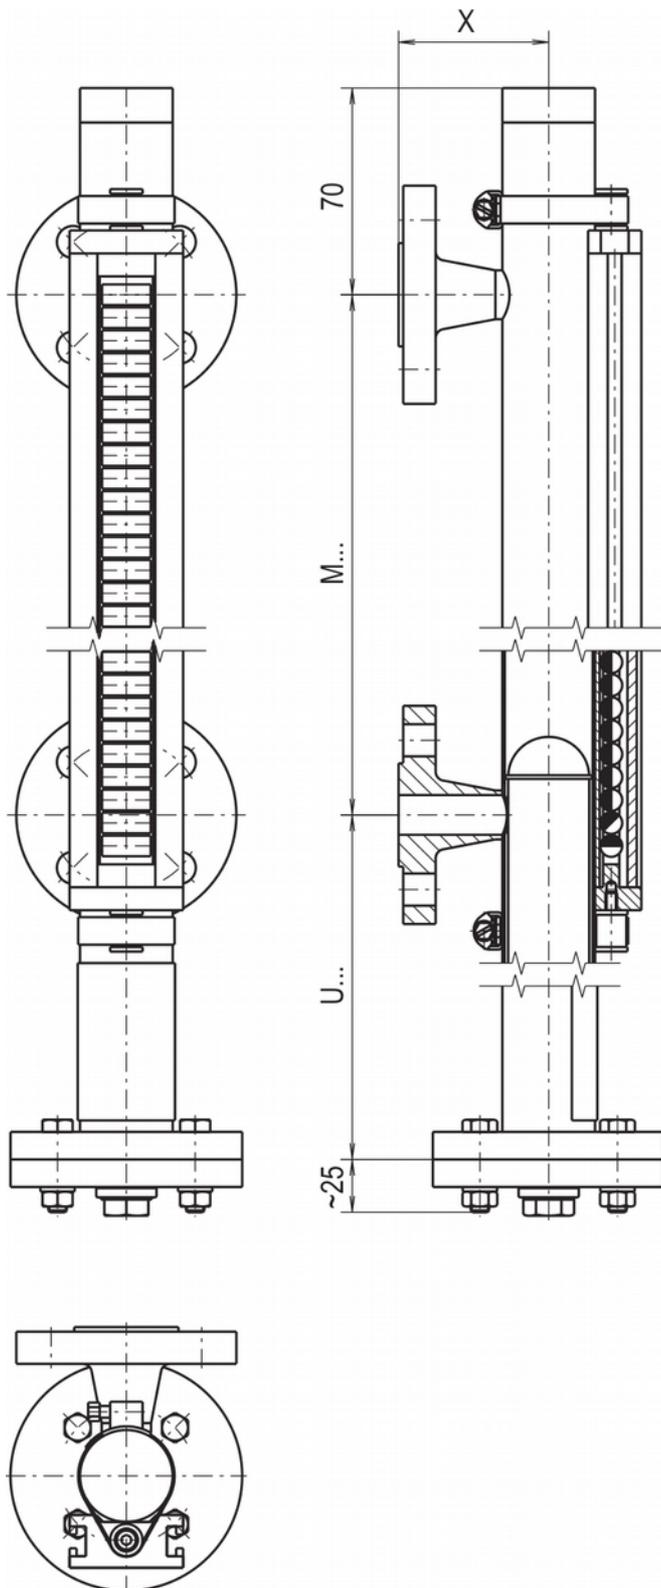

- a float moves with the liquid level of the medium to be measured in a bypass tube mounted on the side of a vessel to communicate with it.
- the radially symmetrical magnet system positioned in the float simultaneously activates the magnetic indicator mounted on the outside of the bypass tube as well as the switching and measuring elements with its magnetic field.

Additional features:

- simple, robust and unbreakable construction, long service life
- bypass tube and float made of stainless steel 1.4571, 1.4404 or special materials
- pressure- and gas-tight separation between measurement and display room
- detection and display of the filling level of a strong aggressive, flammable, poisonous, hot and strong dirty media
- the function of the magnetic display is also available in case of power failure warranted
- can be used in all industrial sectors due to the use of a wide variety of corrosion-resistant materials.
- constant detection of the filling level, independent of physical-chemical changes in the state of the measuring media such as: foam formation, conductivity, dielectric, pressure, vacuum, temperature, vapours, condensation blistering, boiling effects
- interface layer level measurement from Δ -density 100 kg/m³
- special designs: food conform, coatings, liquid gas, heating jacket

Bypass-level-indicator FB06.M... miniature version

Bypass tube made of stainless steel

M = center distance of the process connections
 U = float length (min. 150 mm)
 X = according to process connection

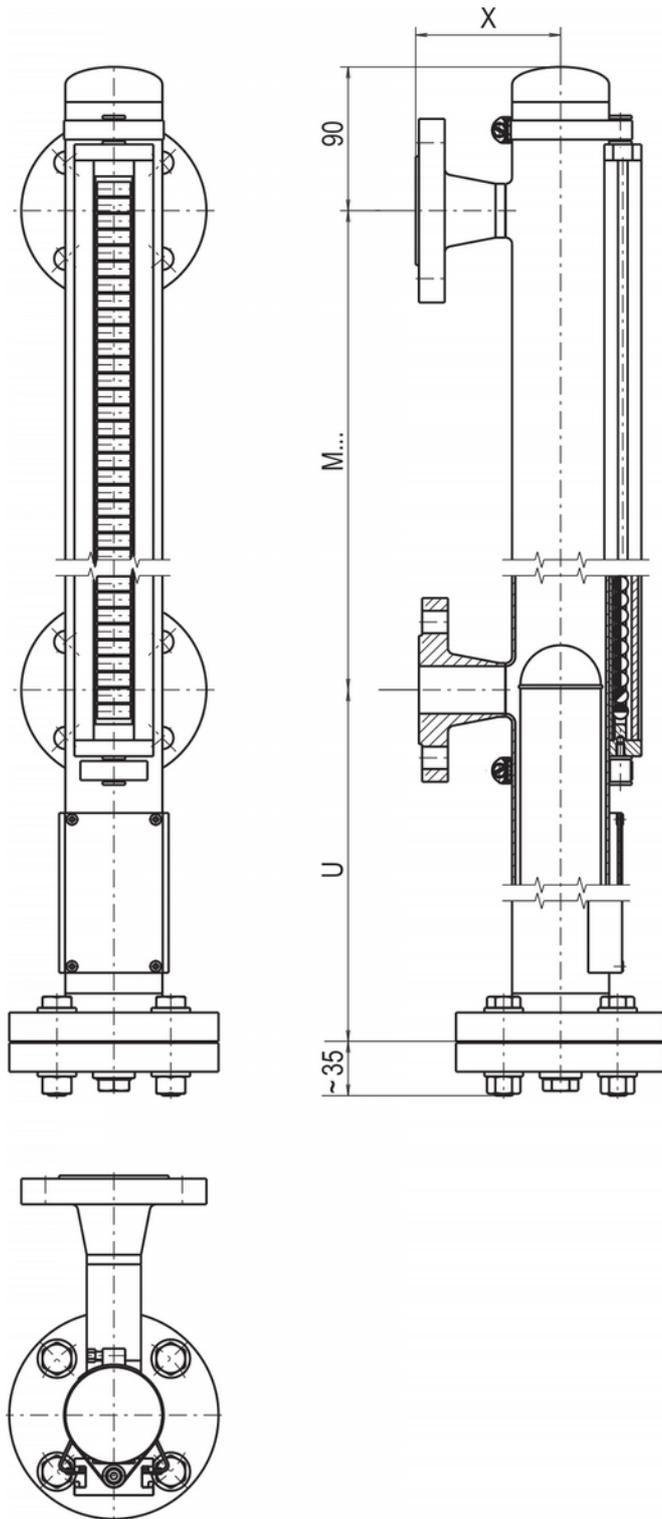

Technical Data:

Bypass tube:	Ø 42,2 x 2 mm, max. 40 bar
Pipe end at top:	tube sheet or flange connection options: <ul style="list-style-type: none"> • venting screw • venting valve • venting flange
Pipe end below:	flange connection options: <ul style="list-style-type: none"> • drain screw • drain valve • drain flange
Process connections 2x lateral:	<ul style="list-style-type: none"> • flange EN 1092-1 DN 10 - DN 100, PN 6 - PN 63 • flange DIN 1092-1 DN 10 - DN 100, PN 6 - PN 64 • flange ANSI B 16.5, 1/2" - 4", class 150 - class 600 • welding nozzle 1/2" - 1" • threaded socket G/NPT 1/2" - 1" • threaded nozzle G/NPT 1/2" - 1"
Center distance:	Min. 150 mm up to max. 5.000 mm
Material:	CrNi-Steel 1.4571 (316Ti)
Nominal pressure:	Max. 40 bar
Temperature range:	-169 ... +200 °C
Float:	cylinder floa
Magnetic display:	rolls, white/red
Level transmitter:	Reed-transmitter
Magnetic switch:	see separate chapter "magnetic switch"
Approvals:	Ex c, GL, DNV

Special versions on request

Bypass level indicator FB06.S... standard version

Bypass tube made of stainless steel

M = center distance of the process connections
 U = float length (min. 200 mm)
 X = according to process connection

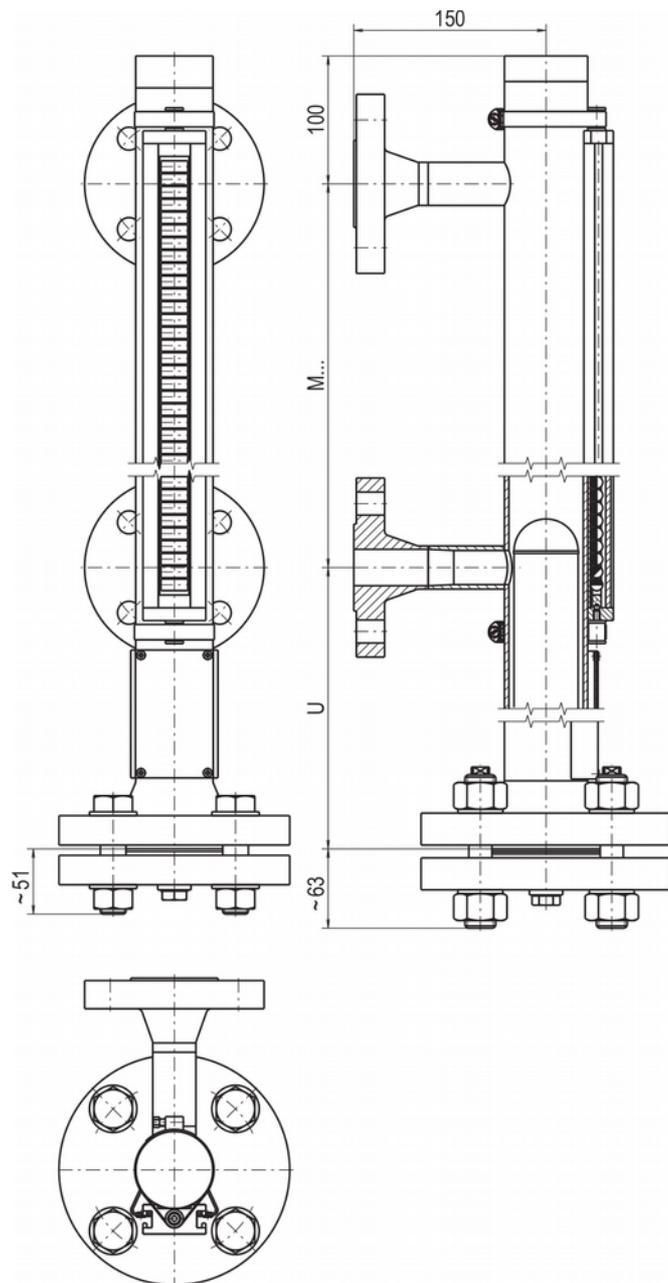

Technical Data:

Bypass tube:	Ø 60,3 x 2 mm, max. 63 bar Ø 60,3 x 2,77 mm, max. 100 bar
Pipe end at top:	tube sheet or flange connection options: • venting screw • venting valve • venting flange
Pipe end below:	flange connection options: • drain screw • drain valve • drain flange
Process connections 2x lateral:	<ul style="list-style-type: none"> • flange EN 1092-1 DN 10 - DN 100, PN 6 - PN 63 • flange DIN 1092-1 DN 10 - DN 100, PN 6 - PN 64 • flange ANSI B 16.5, 1/2" - 4", class 150 - class 600 • welding nozzle 1/2" - 1" • threaded socket G/NPT 1/2" - 1" • threaded nozzle G/NPT 1/2" - 1"
Center distance:	Min. 150 mm bis max. 6.000 mm (larger distances on request)
Material:	st. steel 1.4571 (316Ti), 1.4404 (316L), 1.4401/1.4404 (316/316L)
Nominal pressure:	max. 64 bar
Temperature range:	-196 ... +450 °C
Float:	cylinder float or beading float
Magnetic display:	standard version: up to 200 °C, high temperature version: up to 450 °C
Level transmitter:	reed- transmitter
Magnetic switch:	see separate chapter "magnetic switch"
Approvals:	Ex c, GL, DNV, ABS

fig. left: foam float
fig. right: ball segment float

The design depends on the application, chemical resistance and the physical parameters pressure, temperature and density.

Cylinder Float:

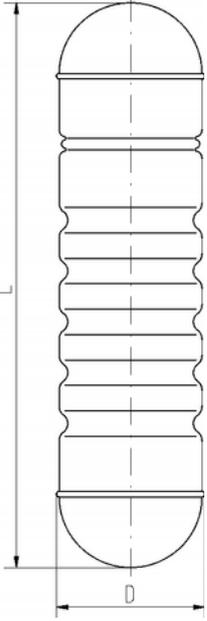

Permissible temperature: -200 ... +400 °C

	PN	Density range [kg/m³]	Diameter [mm]	Length [mm]	Material
	16	1.270 ... 2.000	32	125	st. steel (1.4571)
1.090 ... 1.350		32	150	st. steel (1.4571)	
940 ... 1.110		32	180	st. steel (1.4571)	
850 ... 980		32	210	st. steel (1.4571)	
780 ... 880		32	245	st. steel (1.4571)	
730 ... 800		32	285	st. steel (1.4571)	
40	1.360 ... 2.000	32	125	st. steel (1.4571)	
	1.140 ... 1.400	32	155	st. steel (1.4571)	
	1.010 ... 1.180	32	185	st. steel (1.4571)	
	900 ... 1.020	32	225	st. steel (1.4571)	
	820 ... 910	32	265	st. steel (1.4571)	
	760 ... 830	32	315	st. steel (1.4571)	
	1.130 ... 2.000	32	125	titanium (3.7035)	
	900 ... 1.100	32	160	titanium (3.7035)	
	770 ... 900	32	200	titanium (3.7035)	
	670 ... 770	32	240	titanium (3.7035)	
	610 ... 680	32	290	titanium (3.7035)	
	560 ... 620	32	350	titanium (3.7035)	
	530 ... 570	32	420	titanium (3.7035)	
	490 ... 530	32	510	titanium (3.7035)	

Furthermore, a large number of special floats are available for special requirements.

Beading Float:

Permissible temperature: -50 ... +200 °C

	PN	Density range [kg/m³]	Diameter [mm]	Length [mm]	Material
	25		990 ... 2.000	50	150
		830 ... 1.000	50	185	st. steel (1.4571)
		730 ... 840	50	225	st. steel (1.4571)
		640 ... 730	50	275	st. steel (1.4571)
		590 ... 650	50	335	st. steel (1.4571)
		550 ... 600	50	400	st. steel (1.4571)
		520 ... 560	50	470	st. steel (1.4571)
		490 ... 530	50	555	st. steel (1.4571)
		470 ... 500	50	650	st. steel (1.4571)
		820 ... 2.000	50,8	150	titanium (3.7035)
		710 ... 850	50,8	180	titanium (3.7035)
		600 ... 710	50,8	215	titanium (3.7035)
		540 ... 610	50,8	250	titanium (3.7035)
		480 ... 540	50,8	300	titanium (3.7035)
		430 ... 490	50,8	355	titanium (3.7035)
		400 ... 440	50,8	410	titanium (3.7035)
		380 ... 410	50,8	465	titanium (3.7035)
		370 ... 390	50,8	525	titanium (3.7035)
		360 ... 380	50,8	595	titanium (3.7035)
		340 ... 370	50,8	680	titanium (3.7035)

Furthermore, a large number of special floats are available for special requirements.
